ChemEngineering—Inaugural Editorial

Alírio Egídio Rodrigues

Laboratory of Separation and Reaction Engineering, Department of Chemical Engineering,
Faculty of Engineering, University of Porto, 4200-465 Porto, Portugal; arodrig@fe.up.pt

Received: 25 January 2017; Accepted: 25 January 2017; Published: 4 February 2017

I am pleased to introduce *ChemEngineering*, a new peer-reviewed, open access journal, on behalf of the Editorial Board members.

This new journal will concentrate on the four areas of chemical engineering: process engineering, product engineering, molecular engineering and materials engineering or, in short, ChE = M²P²E. The journal will also focus on applications in energy and environmental engineering, as well as in the bioengineering area.

ChemEngineering will provide a forum for researchers all over the world to discuss and communicate cutting-edge developments in this field. We aim to disseminate the latest academic achievements, promote communication between scholars, and connect theory with practice.

We encourage scientists to publish their experimental and theoretical results in as much detail as possible so that the results can be reproduced, so there is no restriction on the length of the papers.

We welcome you to *ChemEngineering* and invite you to contribute your papers or submit Special Issue proposals. We appreciate your recommendations and suggestions and hope that this journal will provide you with a link to help shape the future of chemical engineering.

Conflicts of Interest: The authors declare no conflict of interest.
