Paper: MAT-HC-6026

## (Partial Differential Equations)

Full Marks: 60

Time: Three hours

# The figures in the margin indicate full marks for the questions.

1. Answer any seven:

 $1\times7=7$ 

- (i) The equation of the form  $P_p + Q_q = \mathbb{R}$  is known as
  - (a) Charpit's equation
  - (b) Lagrange's equation
  - (c) Bernoulli's equation
  - (d) Clairaut's equation (Choose the correct answer)

- (ii) How many minimum no. of independent variables does a partial differential equation require?
- (iii) Find the degree and order of the equation  $\frac{\partial^3 z}{\partial x^3} + \left(\frac{\partial^3 z}{\partial x \partial y^2}\right)^2 + \frac{\partial z}{\partial y} = \sin(x+2y)$
- (iv) Which method can be used for finding the complete solution of a non-linear partial differential equation of first order
  - (a) Jacobi method
  - (b) Charpit's method
  - (c) Both (a) and (b)
  - (d) None of the above

(Choose the correct answer)

(v) State True **Or** False: The equation  $u_{xx} + u_{yy} + u_{zz} = 0$ 

is an Hyperbolic equation.

(vi) Fill in the blanks:

$$\left(\frac{\partial z}{\partial x}\right)^2 + 2\frac{\partial^2 z}{\partial x^2} - \frac{\partial^2 z}{\partial y^2} + z = 0$$

is a \_\_\_\_\_ order partial differential equation.

- (vii) The characteristic equation of  $yu_x + xu_y = u$  is
  - (a)  $\frac{dx}{x} = \frac{dy}{y} = \frac{du}{u}$ 
    - (b)  $\frac{dx}{y} = \frac{dy}{x} = \frac{du}{u}$
    - (c)  $\frac{dx}{u} = \frac{dy}{x} = \frac{du}{y}$
  - (d) None of the above (Choose the correct answer)
- (viii) State True Or False  $xu_x + yu_y = u^2 + x^2$  is a semi-linear partial differential equation.
  - (ix) Fill in the blanks:

    A solution z = z(x, y) when interpreted as a surface in 3-dimensional space is called \_\_\_\_\_\_\_.
  - (x) The partial differential equation is elliptical if
- (a)  $B^2 4AC > 0$ 
  - (b)  $B^2 4AC \ge 0$
- $(c) \quad B^2 4AC \le 0$ 
  - (d)  $B^2 4AC < 0$

(Choose the correct answer)

(viii) What is

3.

- Define quasi-linear partial differential (i) equation and give one example.
- Show that a family of spheres  $(x-a)^2 + (y-b)^2 = r^2$  satisfies the partial differential equation  $z^{2}(p^{2}+q^{2}+1)=r^{2}$
- Eliminate the constants a and b from z = (x+a)(y+b).
- (iv) Determine whether the given equation is hyperbolic, parabolic or elliptic  $u_{xx} - 2u_{yy} = 0$ .
- (v) Solve the differential equation p+q=1.
- (vi) Explain the essential features of the "Method of separation of variables".
- (vii) Mention when Charpit's method is used. Name a disadvantage of Charpit's method.
- (viii) What is the classification of the equation

$$u_{xx} - 4u_{xy} + 4u_{yy} = e^y$$

- Form a partial differential equation by eliminating arbitrary functions f and F from y = f(x-at) + F(x+at).
- Solve (ii)  $y^2p - xyq = x(z-2y)$

Solve any three:

- (iii) Find the integral surface of the linear partial differential equation  $x(y^2+z)p-y(x^2+z)q=(x^2-y^2)z$ which contains the straight line x + y = 0, z = 1.
- (iv) Find the solution of the equation z = pqwhich passes through the parabola x = 0,  $y^2 = z$ .
- Find a complete integral of the equation  $x^2p^2 + y^2q^2 = 1$ .
- (vi) Reduce the equation  $yu_x + u_y = x$  to canonical form and obtain the general solution.

- Apply the method of separation of variables u(x, y) = f(x)g(y) to solve the equation  $u_x + u = u_y$ ,  $u(x, 0) = 4e^{-3x}$ .
  - (viii) Determine the general solution of  $4u_{xx} + 5u_{xy} + u_{yy} + u_x + u_y = 2$ .
- 4. Answer any three : 9101 911 bar 10×3=30
  - (i) Solve  $(p^2 + q^2)y qz = 0$  by Jacobi method.
  - (ii) Solve  $z^2 = pqxy$  by Charpit's method.
- (iii) Find the general solution of the

$$x^{2} \frac{\partial z}{\partial x} + y^{2} \frac{\partial z}{\partial y} = (x + y)z$$

(v) Find a complete integral of the equation such as  $u^2 + u^2 a^2 = 1$ .

$$(mz-ny)p+(nx-lz)q=ly-mx$$

(v) Use  $v = \ln u$  and v = f(x) + g(y) to solve the equation

$$x^2u_x^2 + y^2u_y^2 = u^2$$
. Holling

6

- (vi) Find the solution of the equation  $z = \frac{1}{2} (p^2 + q^2) + (p x)(q y)$  which passes through the x axis.
- (vii) Find the canonical form of the equation  $y^2u_{xx} x^2u_{yy} = 0$ .
- (viii) Classify the second order linear partial differential equation with example.
